## 1 Using the nightly version of the TaxEditor

The nightly version contains the latest updates and bug fixes made to the programming code of the TaxEditor. However, this may also refer to changes made in the data structure of the CDM. The nightly version **should not be used on production versions** of the databases without asuring (with the developers) that this can be done without causing harm.

You can download the nightly version from <https://cybertaxonomy.eu/download/taxeditor/nightly/>
