- Target version changed from Unassigned CDM tickets to Release 5.32

The problem appears if the tree has only a protected titleCache but no presentation. Looks like the portal code does not evaluate the pure titleCache.

Primarily we should fix the portal code but we may also think about handling the title generation differently in TaxEditor and always create a presentation in the default language (or any other if i18n support is switcht on). The TaxEditor issue may become a new ticket.

I move this to current milestone as it is a good ticket for learning how the dataportal configuration part works codewise.

Actually the object returned by the ws does not contain the titlecache, independent of the value of the protectedTitleCache field.

Terms contain an termrepresentation object, this is empty for terms/termcollections created in taxeditor. As a first step the implementation is adapted in a way that with missing representation, the titleCache was used.

We need to adapt the taxeditor implementation, so that not the titlecache but the representation is used.
