Description

Distribution

The map is currently broken due to problems with the map server.

- Distribution Layer: parsererror:Invalid JSON: The URL must be missing some values, or they have been defined.

Make sure you use the following syntax when adding the variables

Eg. `http://edit_wp5/v1.4/areas.php?<?>*Layers&Area Data&Area Style&*Bounding Box&Size

Area Data (ad=) has not been defined`

This is to determine which areas will be symbolized on the map in the format `ad=layer name:a:area code1|b:area code2` etc

You can have information from more layer defined by `ad=layer1 name:a:area code1|b:area code2|layer2 name:c:area code2`

The layers can only be earth, `tdwg1`, `tdwg2` `tdwg3` or `tdwg4`. Click on the name to see a list of the items

Items are optional

Please refer to the wiki for how to setup the service:

`Wiki`

No maps are displayed, only an error message.

Not sure, but for FdG maybe the areas are simply not mapped. But if this is the case I wonder why maps are switched on.

There are pages where the maps work: https://portal.cybertaxonomy.org/flore-gabon/cdm_dataportal/taxon/f1c07476-4cf1-4408-986a-8df1f541161b

does not work

I reimported all data (#10092) and (afterwards) moved all textdata based distribution to "Distribution (General)" and removed "Distribution" from feature tree. This way no structured distributions are shown which are usually not mapped correctly in FdG and also do not make much sense.
