Severity:	normal		

Description

[#5911](#) and [CdmDataportalMultilingual](#) describe how to add and update a translation file.

- Actually the drush command does not work.

```
katja@ubuntu:/var/www/drupal-7-cdm-dataportal/web$ drush php-eval "locale_system_update(array('cdm_dataportal'));drush_backend_batch_process();" 
```

```
PHP Fatal error: Uncaught Error: Call to undefined function cache_get() in /var/www/drupal-7-cdm-dataportal/web/includes/module.inc:762
```

Stack trace:

Drush command terminated abnormally due to an unrecoverable error.

[err

- The extraction described in [#5911](#) is not available in actual portals.
- a really critical issue is the handling of the strings below the search fields in the advanced search view.
 - the translation is added correctly, but sometimes a new string is added without translation, the screenshot shows the same string three times

TEXT GROUP	STRING	CONTEXT	LANGUAGE	OPERATIONS

But there is another way to update the translations: Upload the file from the admin UI.
