Description			
follow up for #6866			
In #6866 data has been atomized and structured already. However, there are datatypes missing. Some of them important.			
Important:			
<ul style="list-style-type: none">• facts (#9584)• original label Info• sex• identifiers (supplemental data)			
Less important:			
<ul style="list-style-type: none">• extensions (supplemental data)• credits (supplemental data)• rights (supplemental data)			
Usage information:			
<ul style="list-style-type: none">• from taxon descriptions (individuals associations)• from specimen descriptions (individuals associations) - rare usecase• from name descriptions (individuals associations) - rare usecase			
Please also test			
<ul style="list-style-type: none">• preservation method, life stage and typification as I did not test them.			
For field units the following (additional) fields are missing:			
<ul style="list-style-type: none">• Collecting Method• Gathering Event Description• All(?) supplemental data (tested for annotations and extensions)• Ecology and plant Description (specific factual data used in field unit facade)• Field notes• Individual count• Not tested: kind-of-unit, life stage			
I only tested specimens (derived units) and field units. Improvements for media specimens are handled in #3756 . Dna samples still need to be tested (#3749).			
<ul style="list-style-type: none">• Also improve handling of derivation events (currently shown "Accessioning" should be removed, maybe it can be included into the tree in some way)			
Also the layout/display for Media could be improved and dicussion is needed if the general layout could be improved (see examples from #6866 for comparison).			
For stored under we may not want the fullTitleCache but titleCache might be enough as the name is linked.

additional issues for specimen page:

mail NK:

Ich weiß nicht ob die 2-Spaltigkeit bei Preserved specimen bis Annotation, so sinnvoll ist, wenn die Character Data umfangreicher sind; vielleicht besser nur Preserved specimen + Identification zusammen 2-spaltig gruppieren, Character Data, Annotations und Media (können es ja auch einige sein), jeweils nur 1-spaltig darunter

- Das specimen-Zitat in übergroßer Schrift am Seitenanfang ist mir schon lange ein Dorn im Auge: Es könnte ohnehin komplett durch den derivation tree am Seitenende ersetzt werden (diesen stattdessen an den Seitenanfang?)
- Der Link am Ende der Field Unit verweist nur wieder auf die Specimen-Seite, ist also eigentlich überflüssig
- Die Fußnote am Ende ist redundant, da schon in Annotations wiedergegeben
- Media: Licenses (ist amerikanisches Engl; brit. = licence; gibt es für Plattform-Text eigentlich eine Regel ob amerik. oder brit. Englisch? Mischung ist die schlechteste Lösung): Der Link verwirrt mich, auf was verweist er? Der Licences Text ist erschlagend lang; der CC-Link könnte doch gleich unter cc-by-sa 3.0 gelegt werden und der 2 Satz ist hier entbehrlich, angesichts des Viewer-Links, wo er dann auch steht.
- Specimen-Text: Datum + Leg hinter Alt.: sollten hier nicht erscheinen (1. falsche Platzierung, 2. redundant, in richtiger Platzierung (+ Format) schon am Ende
