Please remove " (including hierarchical order)" from the documentation. I don't think that status hierarchy is considered somehow for the ordering. In general ordering is not so much done by the status tree. However, there are cases for which the status influences the ordering so in general we can keep the "ordering" in the documentation.

The status tree parameter does not seem to be available for old taxon pages:

ce83fc3f80c6&areaTree=9974652d-9f92-40c2-81de-5e1f67ba0cac
```

We need to discuss if this is wanted. For now we need it primarily for E+M which uses the new taxon pages. Also depends on how difficult implementation is for old taxon pages.

I just realized that we should fully remove "ordering" from documentation as the status tree is currently never used for any ordering of the areas.

After release we need to add the parameter to the E+M dataportal.

It was still there. You removed it from area tree, not status tree. I reverted area tree and adapted status tree accordingly.

For some reason the maps are not shown if one removes any of the terms in use from the "Distribution status filter tree" (test/E+M) - except for the "undefined" term. The filter works correctly on the textual representations (full text and condensed string) but the map continuously shows the loading symbol:

"Absent" is not a status that is in use in E+M. You should remove (or move to another tree) a status that is in use on the page you test.

Franck Theeten found out that a parameter is missing:

It seems that the parameter in "ad" was missing for the "f" class (see example below with fake values : f:Da,Fe|)

Can you add information which taxon you checked and which status you removed?

For some reason the maps are not shown if one removes any of the terms in use from the "Distribution status filter tree" (test/E+M) - except for the "undefined" term. The filter works correctly on the textual representations (full text and condensed string) but the map continuously shows the loading symbol:

I compared the mapUriParams and they are identical except for the one missing param (which is expected):

```

As I described here the webservice itself did (in this example) not return incorrect data. So I wonder if it is really a distributionInfo webservice based error.

#32 - 01/31/2024 02:29 PM - Andreas Müller

I could now reproduce by using the above (note-17) *Abies alba* link and removing "native" from the status tree. Again "endemic" is missing in ad (this time it is style "g").

```

"as=a:c86400,,0.1,|b:c89600,,0.1,|c:ffed6f,,0.1,|d:ffff00,,0.1,|e:fdb462,,0.1,|f:c8c800,,0.1,|g:77ed6f,,0.1,|h:00c8b4,,0.1,
&ad=euromed_2013%3Aemarea:a:Br,Hb%28N%29,No,Su,Hb%28E%29|b:Es,Lt,Ho,La,Si%28S%29|c:Cy|d:Be,Fa,Sa,Lu,Ga%28F%29|e:Tu%28A%29|f:Da,Fe|h:Tu%28E%29&title=g:endemic|a:naturalised|f:casual|b:introduced|c:introduced%3A+doubtfully+introduced+%28perhaps+cultivated+only%29|h:native%3A+presence+questionable|d:cultivated|e:native%3A+reported+in+error"

```

Interesting is that once "endemic" is also removed from the status it works again.

Also important to understand the "endemic" is only used by the area "Euro+Med" which is not shown on the map as it is a higher level area.

This should be fixed now. See [#9500#note-34](#).

The above example works now with removing status "native"

Distribution

#34 - 01/31/2024 11:54 PM - Andreas Müller

- Status changed from Feedback to Closed

- % Done changed from 80 to 100

So I guess we can close this ticket.
