

EDIT - feature request #2001

[Cichorieae Portal] Name Relationship -> blocking name are not shown

09/15/2010 02:07 PM - Francisco Revilla

Status:	Closed	Start date:	
Priority:	Highest	Due date:	
Assignee:	Francisco Revilla	% Done:	100%
Category:	cdm-dataportal	Estimated time:	0:00 hour
Target version:	DataPortal Release v3.0		
Severity:	normal		
Description			
The new ticket is a new feature derived from ticket #1421. See the text below.			
There is an important addition to that ticket: In a few cases names are blocking new combinations. They are no homonyms, but should be similarly displayed. So, there is possibly one solution for both problems.			
Producing the Med-Checklist this problem has been solved by adding the blocking name in the "notes (relation)" box of a name. An example in the Cichorieae data base is <i>Lactuca dubyaea</i> with the blocking name <i>L. hispida</i> . In that case the following version should be displayed in the synonymy:			
≡ <i>Lactuca dubyaea</i> C. B. Clarke, Compos. Ind.: 271. 1876 [non <i>L. hispida</i> DC.]

Mail Ralf (2.9.2010):

Es heißt in einem Kommentar, das Problem könne über die Blockierbeziehung in name relationship geregelt werden. Ich habe das gerade an dem Beispiel mal getestet – ohne Erfolg. Vielleicht sollten wir das bei Gelegenheit nächste Woche mal zusammen ansehen, wenn Niels zurück ist. In dem Fall blockiert *Lactuca hispida* DC. einen fiktiven weiteren Namen *L. hispida*, der letztlich nicht geschaffen wird, dafür aber *L. dubyaea*. Wo trage ich dann die Namensbeziehung ein?
