Description

It would be more comfortable if the user doesn't need to reed all preferred flags to find out what the preferred/current determination of a specimen is.

Better we show the one preferred determination and all other non-preferred' specimen separately.

Note: setting the preferred determination may influence the set of other by pushing the last preferred determination to the determination history. So the both userinterface should update each other.

[DISCUSS] the later behaviour needs to be discussed. we could also completely remove the last preferred determination once a new one is set.

implemented since r12121

#6 - 06/01/2011 11:33 PM - Andreas Müller

- Assignee changed from Andreas Müller to Niels Hoffmann

we probably still need one or two buttons for

1) toggling current and historical determinations or

2) just move the current one into the history (for entering a new one) or

3) moving a historical one up to the current one (if no current exists currently)

#7 - 08/04/2014 07:54 PM - Andreas Müller

These are still open. We may also discuss with users (Campanula) how they would like to have this implemented best.
