Severity:	normal		

Description

From Eckhard,

"

Per definition, a homotypic group can only have one basionym. So, when a basionym has been chosen for a homotypic group with the Editor (right mouse click), this option should not be available any more for the other members of the same homotypic group. Currently, I can chose all the names within a homotypic group as basionyms, and all the relations between names will be created! This should not be allowed! (a warning might pop up saying "this homotypic group already has a basionym. Do you want to replace this with the new one now"?)

"

History

From Andreas,

"

generally the Editor philosophie is to have as little warnings which need user interaction as possible, so instead of having an extra warning we could I would prefer to simply change the right click menu label to a label which fully expresses what happens if you push the menu item (e.g. something like "make this name the only basionym of the group" but a bit shorter).

A question about Eckhard statement that there is always just 1 basionym per group: I remember 2 names/taxa in E+M having 2 basionyms, which is a rare exception but an exception that exists. As it is a rare exception we can handle it via the details view rather than the freetext editing. However, also for dirty data (which I regularly work with) it is important that the Editor is still able to show the fact that there is more than 1 basionym for a given homotypic group, even if the freetext area does not allow to create this kind of data. This is important because otherwise the fact is invisible to the taxonomist who wants to clean up the data.

Who ever is going to implement this, please have this in mind.
