related to and possibly a duplicate of [#3983](#) (easier referenz selection - Euro+Med sourceID [DISCUSS])

It is related but not a duplicate., [#3983](#) is about sourceId, this ticket is about prefilling with nomenclatural author information. Also closely related is [#3984](#).

Seems to work, but maybe also Eckhard should have a look as it is an E+M requirement.

Also the type of the reference may act as an additional filter. Seems not to be implemented yet, but maybe we should open a new ticket for it as this is not strictly related. Semantics might be that all reference types that do not implement `INomenclaturalReference` should be filtered (all types except Generic, Book, Book Section, Article and Section)

Hallo Katja,

diese Funktion sollte nur diejenigen Referenzen liefern, bei denen Greuter der alleinige Autor ist. Im Screenshot unten ist er einer von mehreren Team-Autoren. Das ergibt keinen Sinn, denn dann müssten diese Autoren schon im Autorenfeld auftauchen. Oder aber die Referenz sollte z.B. lauten "Greuter in Greuter & al." und müsste auch so angezeigt werden.

Schönen Gruß Eckhard

Changed from matching of nomenclatural titleCache to matching of id of the author. Now only references of exact the same author are shown when opening the nomenclatural reference selection dialog. Also added a test.

The search works again but it does not seem to use the new search via author id. It looks like the code for the TaxEditor is not yet committed.

Note: testdata on rem\_conf\_am are 2 authors with cache "Testlink" (1 is used by 3 refs, the other one by 1 ref)
