

EDIT - bug #3635

Protologue media should also be displayed when mime type is missing

08/05/2013 05:20 PM - Andreas Kohlbecker

Status:	New	Start date:	
Priority:	New	Due date:	
Assignee:	Andreas Kohlbecker	% Done:	0%
Category:	cdm-dataportal	Estimated time:	0:00 hour
Target version:	Unassigned CDM tickets	Found in Version:	
Severity:	normal		
Description			
Currently only protologue media with the following mime types is displayed:			
<pre>'application/pdf', 'image/png', 'image/jpeg', 'image/gif', 'text/html',</pre>			
This is due to the filtering for preferred mime types which takes place in theme_cdm_taxonName()			
possible solutions:			
1. remove preference filter			
2. second request without filter or directly take the media representation from the name description element if available
