

EDIT - feature request #3958

Handle CDMPreference table

01/14/2014 10:42 PM - Andreas Müller

Status:	Closed	Start date:	
Priority:	Priority09	Due date:	
Assignee:	Andreas Müller	% Done:	67%
Category:	cdm	Estimated time:	0:00 hour
Target version:			
Severity:	normal		
Description It is implemented in model but not yet used and not filled with any data. Methods in Service layer are also missing. Keep in UML milestone as we may need a data updater (e.g. #3658). Move otherwise. Decisions for the syntax of the different fields: subject: <ul style="list-style-type: none">• / (Database wide)• /TaxonNode for a classification or subtree• /editor (??) for purely TaxEditor related preferences (e.g. show ID in supplemental data view)• TBC predicate: No required structure, but package like structure with dot separators makes sense <ul style="list-style-type: none">• aaaa.bbb.ccc.MATCH_MODE• aaaa.ee.ff.abc• allows starts with search to return lists of values• Case insensitive (?)• each predicate might be defined by as a constant of an enum object: up to the predicate to implement Difficulties may occur when trying to match filters (subjects). An object that requires a preference (e.g. a TaxonName requires a list of available ranks) may match to multiple filters which map to different values (e.g. because the name is used in multiple classifications) for details see: #3555 , see also open issues there related #5004 , #3773 , #5969
