Description

Currently the import is failing to import the hierarchy. Also performance is very bad, so we may want to improve the import by

- splitting it into parts

- remove auditing and other features which may not be needed for the CoL #6880

- also see other open issues like #3210

Splitting into parts may include

- using database based mapping instead of in-memory mapping

- splitting taxon relationship import into synonym relationship, higher taxon rank relationships and lower taxon rank relationships imports

Possibility for splitted import is mostly implemented now and the latest import was using it.

However, we should still work on the auditing issue
