Description

This occurred when running the TransmissionEngineDistribution on the Cichorieae database from Rank *Genus* to *Kingdom*:

http://api.cybertaxonomy.org/cichorieae/description/accumulateDistributions?mode=byAreasAndRanks&targetAreaLevel=25b563b6-6a6c-401b-b090-c9498886c50b&priority=7&upperRank=fbe7109d-66b3-498c-a697-c6c49c686162&lowerRank=1b11c34c-48a8-4efa-98d5-84f7f66ef43a&frontendBaseUrl=http%3A%2F%2Fapi.cybertaxonomy.org%2Fcichorieae%2F

The TransmissionEngineDistribution stops at 24%

The logfile does not reveal any hint why this happend. Maybe the calculation of the total work is wrong or an caught Exception occurs which is not handled property.

seems to be fixed by one the latest changes (most probably aadb17f) :

- 9b7db8d TransmissionEngineDistribution: solving problems with excessive heap consumption

- aadb17f [#5191](#) fixing process monitor updating in TransmissionEngine   this is most probably not fixing the ticket but helps providing more reliable monitoring

- f5295f3 [#4366](#) Transmissionengine aggregation of source references

- 1b70bad TransmissionEngine: modification to status compare function for case a==b

- 848f720 [#5177](#) fixing tests which where broken after rebasing the TransmissionEngine-speedup on develop   - lower rank limit of for the aggregation was too high

- 09023b8 fixing bugs related to the rank intervall in the TransmissionEngineDistribution

- 869c3f8 solving multiple problems in TransmissionEngine   - avoiding LIE by fetching the parentAreas for each batch   - skipping taxa not in specified rank interval
