Description

For example:

1. Create taxon Achillea millefolium × Achillea nobilis in the navigator

2. Three names will be created and can be found in name bulk editor (Achillea millefolium, Achillea nobilis, Achillea millefolium × Achillea nobilis)

3. Search for Achillea millefolium* in the taxon search -> hybrid is not listed

I am not sure if this is a wanted feature.

This is because hybrids do not have a namecache and the search works on the nameCache.
