Description

... and also for some other references.

Split from #2862: The current DefaultReferenceCacheStrategy does not handle inReferences correctly. E.g. volumes and other information is not shown.

This seems to be fixed for simple reference (see test "testGenericMissingVolume"). For inreferences it is unclear what the expected result should be.

- Should the result include the volume of the reference but not of the inreference? - I think yes.
- Should the result include the volume of the inreference if the reference has no volume? - I think yes.
- Should this hold for both nomenclatural citation as well as bibliographic citation? - I think yes.
