Target version:	CDM UML 4.1			
Severity:	normal			

Description

In simple views that do not show the full description hierarchie (item - descriptionBase - DescriptionElementBase/Feature- xxx) we sometimes need a possibility to decide where to put a description element. Therefore we should have a default DescriptionBase that all elements go into as long as they have no specific DescriptionBase defined.

Example: the planned simple tabular distribution viewwhich allows adding a descriptionBase but does not require (#5876)

Implementation in TaxEditor: #5973
