EDIT - task #6005

Create subprojects of EDIT platform components

07/25/2016 10:14 AM - Andreas Kohlbecker

Status:	Rejected		**Start date:**	
Priority:	New		**Due date:**

Target version:				
Severity:	normal			

Description

The issues related to platform components which have their own git repository should be managed in a separate subproject.
This is beneficial since Subprojects have their own code repsitory. If all components are managed in the master project **EDIT** we would have to distinguish the repos when referencing changesets.

The component dataportal already has been moved into a sub-project:

```
update issues i join issue_categories ic on ic.id = i.category_id and ic.name = 'dataportal'
set i.project_id = 2 where i.project_id = 1;

select * from issues i where i.project_id = 2
```

IMPORTANT Is seems as if the components are lost when moving the tickets to a subproject, this is not a problem in case of the cmd-dataportal since the subprokect replaces the component, but for other issues this may be relevant and must be handled.

The following sub projects need to be created:

- cdm-dataportal *DONE*
- cdmlib-app *DONE*
- cdmlib
- taxeditor
- cdm-vaadin
- cdm-sever
- ....

History

#1 - 07/25/2016 10:19 AM - Andreas Kohlbecker

- Subject changed from Create subprojects of EDIT f to Create subprojects of EDIT platform components

#2 - 08/02/2016 08:05 AM - Andreas Kohlbecker

- Description updated

supproject created for cdmlib-app, for now only with one issue.
We should check the 'components' given to the cdmlib-app issues. Do we need to preserver the components?

#3 - 10/25/2016 02:54 PM - Andreas Kohlbecker

- Status changed from New to Rejected

We have discussed the idea of using subprojects for the EDIT platform components and have decided against this.
Closing ticket as rejected.
