

## EDIT - bug #6104

### install gitolite

09/20/2016 11:41 PM - Andreas Kohlbecker

<b>Status:</b>	New	<b>Start date:</b>	
<b>Priority:</b>	New	<b>Due date:</b>	
<b>Assignee:</b>	Andreas Kohlbecker	<b>% Done:</b>	0%
<b>Category:</b>	devOps	<b>Estimated time:</b>	0:00 hour
<b>Target version:</b>	Unassigned CDM tickets	<b>Found in Version:</b>	
<b>Severity:</b>	normal		
<b>Description</b>			
The git repos need an access control and a general management layer.			
Gitolite seems to be the best choice: <a href="http://gitolite.com/gitolite/">http://gitolite.com/gitolite/</a>			
<a href="https://git-scm.com/book/de/v1/Git-auf-dem-Server-Gitolite">https://git-scm.com/book/de/v1/Git-auf-dem-Server-Gitolite</a>			
Gitolite can also be integrated into redmine:			
<a href="https://www.redmine.org/plugins/redmine_git_hosting">https://www.redmine.org/plugins/redmine_git_hosting</a>			
<a href="http://redmine-git-hosting.io/get_started/">http://redmine-git-hosting.io/get_started/</a>			
Maybe it makes sense to install this redmine plugin so that all important functionality is available from within one application.			
<b>IMPORTANT:</b> For using redmine-git-hosting it is highly recommended to run redmine with <b>nginx</b> , NOT with apache, see <a href="http://redmine-git-hosting.io/how-to/install-redmine/">http://redmine-git-hosting.io/how-to/install-redmine/</a>
