

## EDIT - bug #6115

### protect cdm content by drupal permission

09/29/2016 06:40 PM - Andreas Kohlbecker

<b>Status:</b>	Closed	<b>Start date:</b>	
<b>Priority:</b>	New	<b>Due date:</b>	
<b>Assignee:</b>	Andreas Kohlbecker	<b>% Done:</b>	100%
<b>Category:</b>	cdm-dataportal	<b>Estimated time:</b>	0:00 hour
<b>Target version:</b>	Release 4.4	<b>Found in Version:</b>	
<b>Severity:</b>	normal		
<b>Description</b> A couple of portals are currently in maintenance mode because the taxa and names must not be disclosed to the public. I would be better to protect all content coming from the cdm with a drupal permission: view cdm content  By default this permission should be given to the role 'anonymous user' and 'authenticated user'  TASKS: <ul style="list-style-type: none"><li>• implement permission view cdm content</li><li>• implement update</li><li>• modify installation profile</li></ul> Making the cdm content inaccessible by making use of this role requires a few steps: <ol style="list-style-type: none"><li>1. Adapt the permission <i>Access CDM content</i> in admin/people/permissions. E.g. withdraw the permission <i>Access CDM content</i> from the <i>anonymous user</i></li><li>2. Configure the visibility of the activated cdm blocks by restricting the block visibility to specific roles. In the block configuration form (Structure-&gt;Blocks-&gt;Configure): <i>Roles --&gt; Show block for specific roles</i>. E.g. Allow all roles except <i>anonymous user</i>:<ul style="list-style-type: none"><li>◦ CDM taxon tree <i>admin/structure/block/manage/cdm_taxontree/cdm_tree/configure</i></li><li>◦ CDM - Search Taxa <i>admin/structure/block/manage/cdm_dataportal/2/configure</i></li><li>◦ CDM - Classification breadcrumbs</li><li>◦ CDM - Taxonomic children</li><li>◦ CDM - Identification keys</li></ul></li></ol>			
<b>Subtasks:</b> bug # 6235: page duplication when accessing restricted content			<b>Rejected</b>

Hi Andreas,

the review of this ticket need intensive testing. I suggest we use one of the published portals on the edit-test server to configure it so that we can reproduce the use case of the caryophyllales portals. We could use the euro+med portal for this purpose.

Andreas

**#3 - 11/08/2016 12:27 PM - Andreas Kohlbecker**

- Status changed from Resolved to In Progress

The protection can be by passed by accessing the content via the drupal node integration. An according check must be implemented in the node integration.

Currently the taxon tree is still shown at Flora Malesiana: <http://test.e-taxonomy.eu/dataportal/preview/flora-malesiana/>

But maybe this is only an update problem as the same does not happen at Euro+Med

As explained in the updated issue description the block must be configured individually. This is neither a bug nor an update problem. The implementation of the new permission was the missing feature. With this permission a portal can now configure so that no cdm content is undisclosed. Except for the bug described in comment 3

I fixed the above described bug. Please test again.

NOTE: There is a new section in the description on how to test this feature.

- Description updated

**#14 - 01/06/2017 11:42 AM - Andreas Müller**

- Status changed from Resolved to Feedback

- Assignee changed from Andreas Müller to Andreas Kohlbecker

Seems to work, so we can close this ticket.

Only issue is that it is difficult to use so I wonder if we can't have a one click solution that does all this in background, if possible.
