

EDIT - bug #6287

Rolling cdmserver.log file only contains entries from startup phase

12/19/2016 04:05 PM - Andreas Kohlbecker

Status:	Duplicate	Start date:	
Priority:	Priority14	Due date:	
Assignee:	Andreas Kohlbecker	% Done:	0%
Category:	cdmserver	Estimated time:	0:00 hour
Target version:		Found in Version:	
Severity:	normal		
Description			
The last entry in the cdmserver.log always is:			
<pre>... INFO [eu.etaxonomy.cdm.server.instance.CdmInstance] - lifeCycleStarted</pre>			
the logging is only received by the console logger.			
The cdmserver.log is hard coded in the Booloader class. preferably the logger should be configured in the log4j.properties.			
see http://www.eclipse.org/jetty/documentation/current/configuring-logging-modules.html#_capturing_console_output			
for details.

ref #6287 removing useless RollingFileAppender logger

History

#1 - 12/19/2016 04:14 PM - Andreas Kohlbecker

- Subject changed from cdmserver.log only contains entries from startup phase to Rolling cdmserver.log file only contains entries from startup phase

- Description updated

The logging into files needs to be configured to jetty:

<http://www.eclipse.org/jetty/documentation/current/configuring-logging.html#configuring-jetty-logging>

by default jetty will default to using an internal org.eclipse.jetty.util.log.StdErrLog implementation. This will output all logging events to STDERR (aka System.err). which will be written into out.log
