A problem in the session handling? Maybe solved when [#5285](#) is completed?

Are there any observable abnormality in the log of the cdm-remote instance when doing the login into vaadin ui?

I already have an idea because at one time I "fixed" the logout functionality which is maybe the culprit.

I can't reproduce this anymore. I tested on cuba production. Probably it is fixed with the above commit or with the general refactoring of security in vaadin.
