Description			
<p>After a testing session with Norbert we decided to use a very restrictive UI to avoid any synchronization problems. This may change later if we have solved the general "Refresh" issue (#4135)</p> <p>The way we want to restrict the UI is mostly about the consensus sequence as this can be addressed from three side: AlignmentEditor, DetailsView, attached contig file.</p> <p>Disable the consensus sequence text field:</p> <ul style="list-style-type: none">• if any contig file is attached in the details view• if a consensus sequence is created with AlignmentEditor i.e. if single reads exist as derivatives/children• Enable if nothing else exists <p>Do not allow to add a contig file in the details view:</p> <ul style="list-style-type: none">• if a consensus sequence is created with AlignmentEditor i.e. if single reads exist as derivatives/children <p>Remove option to load pherogram from within the AlignmentEditor.</p> <p>Do not allow importing contig files (currently not implemented, although this may not be so critically)</p> <p>Speed up the rendering of the consensus sequence text field for long sequences</p>
