

EDIT - bug #6414

feature request # 6203 (New): Implement unplaced and excluded in dataportal

use short name for excluded, unplaced taxa when the genus of the parent taxa is different

02/10/2017 02:03 PM - Andreas Kohlbecker

Status: New	Start date:
Priority: Priority13	Due date:
Assignee: Andreas Kohlbecker	% Done: 0%
Category: cdm-dataportal	Estimated time: 0:00 hour
Target version: Reviewed Next Major Release	Found in Version:
Severity: normal	
Description	
This is handled in <code>cdm_dataportal.module#cdm_dataportal_shortname_of()</code>	
However, we should consider solving this issue in a more general way. The <code>cdm_dataportal_shortname_of()</code> method is only used in the context of the taxon tree and of the classification breadcrumbs. We could check for any taxon if the parent taxon has a different genus. This way it would be more reliable and consistent in situations where the data is 100% clean. To avoid performance overhead the parent taxon should be passed as parameter to the method.
