

Edit - feature request #6547

Implement excluded and unplaced in taxon navigator

Description

They should both be put to the end (first unplaced then excluded) (maybe this exists already) and should be visualized with an according icon.

Alternatively we could group them under virtual tree nodes labeled "excluded" and "unplaced". This is how excluded and unplaced ("incertis sedis") were handled as long as the flag did not yet exist.

Also this ticket might be related to a ticket (exists?) which discusses if we should handle TaxonNode instead of Taxon in Name Editor.

exist an icon we can use for unplaced or excluded taxa?

I implemented the comparator for putting the excluded and unplaced taxa to the end.

the unplaced are marked by a turned question mark and the excluded taxa by a slashed o.

Maybe we have to open a new ticket for finding better/nicer symbols.

#7 - 02/14/2018 02:29 PM - Andreas Müller

Generally works. Only we may want to automatically refresh the navigator tree and labels after closing the taxon node dialog.

Reopen as sorting does not yet work with "alphabetic" sort order, only with "rank + alphabet".

#13 - 02/19/2018 02:17 PM - Katja Luther

Applied in changeset [cdmlib|65107bf34868fc063c4397f965cf646cdfbe0cb0](#).

now there is the excluded/update check in TaxonNodeByNameComparator, so the sorting works for the alphabetic order, too. The comparator is in cdmLib, for testing the server needs to be updated.

seems to work well now, also for alphabetic order.
