

## EDIT - bug #6628

### require vaadin UIs to be explicitly enabled per cdm-webapp instance

05/08/2017 04:09 PM - Andreas Kohlbecker

<b>Status:</b>	Closed	<b>Start date:</b>	
<b>Priority:</b>	Highest	<b>Due date:</b>	
<b>Assignee:</b>	Andreas Kohlbecker	<b>% Done:</b>	50%

<b>Target version:</b>	Release 4.7	<b>Found in Version:</b>	
<b>Severity:</b>	critical		
<b>Description</b>			
<p>There are reasons why it is crucial that vaadin applications are inactive in cdm-webapp instances per default unless explicitly enabled.</p> <p>A vaadin application is represented by the context of a Vaadin UI, so we need a mechanism to enable vaadin UIs on a per cdm-webapp instances which must work in the cdm-server and also in development environments. Therefore a per instance java properties file seems to be appropriate:</p> <pre>~/ .cdmLibrary/remote-wepapp/{cdm-webapp-instance-name}-app.properties</pre> <p>The content of the properties file to enable all UIs which are currently implemented:</p> <pre>cdm-vaadin.ui.activated=registration,concept,distribution,editstatus</pre> <p>More details on the reasons why explicit enablement of vaadin UIs is important:</p> <ul style="list-style-type: none"><li>• Some UIs are special to specific projects and must not be available in general.</li><li>• Different vaadin applications bring their own special data which need to be initially inserted into the database like for example Roles. This data however is not wanted in other databases. Cluttering database with management data from other projects must be avoided.</li></ul> <p><b>This issue must be solved prior the release 4.7!</b></p>
