Description			
Various representations of TypeDesignations are needed in the edit platform components.

This includes the following requirements:			
<ul style="list-style-type: none">'deduplication'/grouping by FieldUnitcorrect ordering by type status....			
This should be solved consistently by one class in cdmllib instead of having separate implementations in each of the platform components.			
The following implementations exist so far:

As we do have TypeDesignationSetManager in cdmlib now and all open tickets are dataportal related I guess we could either close this ticket or handle it as a master ticket for the open dataportal issues on type designations.

Please decide.

I tagged all related tickets, so there is not need for a mater and we can close this issue in principle now.

Please could you add the ticket(s) in which context the TypeDesignationSetManager has been improved to the ticket description here? Or are they too hard to identify?
