#### Description

An additional parameter for the ABCD import configuration wizard is needed.

When importing specimen/units into an existing classification it is necessary that associated units e.g. DNA-samples etc. are imported and correctly attached to already existing specimen. This is a current usecase for the molecular data to be imported into the CampanulaceaeDB and for similar projects.

It must be possible to import specimen from the herbarium first and later on add molecular samples via the DNA-Bank by conducting additional imports.

The Import Configuration Wizard needs a new parameter:

Import novel/new children/units of already existing specimens

the tooltip could be: new children of specimen that have been imported previously, will be imported and attached accordingly

#### History

##### #1 - 11/18/2019 03:56 PM - Andreas Müller

- Assignee changed from Patrick Plitzner to Katja Luther

- Target version changed from Unassigned CDM tickets to Release 5.12

Is this still an open issue/duplicate/related to other tickets?

##### #2 - 01/16/2020 02:00 PM - Katja Luther

- Status changed from New to Worksforme

- Target version deleted (Release 5.12)

I don't what this means exactly. When importing e.g DNA samples of already existing specimen, this is correctly attached to the existing specimen. So I will close this ticket-
