

Edit - bug #6885

UserService.loadUserByUsername() cannot find user in long running session

08/04/2017 12:25 PM - Andreas Kohlbecker

Status:	New	Start date:	08/04/2017
Priority:	New	Due date:	
Assignee:	Andreas Müller	% Done:	0%
Category:	cdmlib	Estimated time:	0.00 hour
Target version:	Unassigned CDM tickets	Found in Version:	
Severity:	normal		
Description			
When UserService.loadUserByUsername() in a long running session which is managed through the ConversationHolder, the user is never found.			
This can breaks login attempts made from within the conversation since loadUserByUsername() is being used in the DaoAuthenticationProvider:			
<pre>protected final UserDetails retrieveUser(String username, UsernamePasswordAuthenticationToken authentication) throws AuthenticationException { UserDetails loadedUser; try { loadedUser = this.getUserDetailsService().loadUserByUsername(username); } catch (UsernameNotFoundException notFound) { if (authentication.getCredentials() != null) { String presentedPassword = authentication.getCredentials().toString(); passwordEncoder.isPasswordValid(userNotFoundEncodedPassword, presentedPassword, null); } throw notFound; } }</pre>

Is this still an open issue after now not using long running sessions in Vaadin anymore? If not, can we set to Rejected? If yes, can you provide more information or a cdmlib test which describes the problem.
