Severity:	normal		
Description			
The first call of the namedAreaSelectionDialog needs quite long. This is because it loads all terms, while no selection is used at this moment

It was still about 6sec when choosing a new country for a FieldUnit.

But maybe it is faster than before. I don't remember how long it took back then.

- Target version changed from Release 4.10 to Release 4.11

now the first opening of the selection dialog is faster, but searching for the first pattern still needs some time. For the namedAreaSelection dialog there is still no uuidAndTitleCache service method to get the corresponding named areas.

I move this to 4.11 to solve the problem completely.
