Description			
what is the difference between <code>changeSynonymToRelatedTaxon()</code> and <code>changeSynonymToAcceptedTaxon()</code>			
I just stumbled upon this while removing the e3 name editor (#6595)

ref #6928: correct javadoc for `changeSynonymToRelatedTaxon` and `changeRelatedTaxonToSynonym`

History

#1 - 09/06/2017 09:54 AM - Katja Luther

`changeSynonymToRelatedTaxon` creates a new taxon that has a taxon relationship to the other taxon and `changeSynonymToAcceptedTaxon` creates a new accepted taxon with the other taxon as parent

#2 - 09/06/2017 10:36 AM - Andreas Müller

- Assignee changed from Andreas Müller to Katja Luther

- Target version deleted (Unassigned CDM tickets)

There is a "TODO still needed and correct?" comment on `changeSynonymToRelatedTaxon` javadoc. Is this still needed. Do we use this method for changing synonyms to misapplied names?

Also the same javadoc is on `changeRelatedTaxonToSynonym`. This is probably not correct as it is the reverse function.

Katja, can you please adapt the javadocs and then close this ticket as rejected?

#3 - 09/06/2017 10:58 AM - Katja Luther
