Preference pages are shown in editor parts

<b>Target version:</b>		<b>Found in Version:</b>	
<b>Severity:</b>	normal		
<b>Description</b>			
Sometimes preference pages are drawn into open parts of the editor.			
One way to reproduce			
1. Open a taxon name editor			
2. Open the preferences and close them			
3. Open another taxon			
4. Click on the name editor of the first taxon			
When closing an re-opening the taxon everything's fine.			
This is possibly connected to using the external preference migration library from opcoach ( <a href="#">#7006</a> )

this happened because of a third-party e4 library that we decided to not use anymore but instead create our own e4 preferences
