Description

Katja:
I don't know if this is an old issue: but setting a synonym in a heterotypic (to the accepted taxon) homotypic group as basionym changes the symbol of the synonym from homotypic to heterotypic.

this is again an update problem because the basionym should be the first synonym in the list and then the icon is correct. same problem when drag&drop a synonym in the homotypical group of an other synonym, the order should be recalculated.

The symbol is actually not changed from homotypic (blue) to heterotypic (green) but from heterotypic default (light green) to heterotypic basionym (dark green) as far as I can see

the container should be refreshed to have the correct order, then the symbol is correct
