<b>Description</b>			
<p>With e4 we temporarily switched of the restore functionality in taxon navigator (before it could be be switched on via preferences). This should be switched on again after full migration.</p> <p>Copy from #6909: "About restoring: Nothing is restored because we decided to start with a fresh workbench every startup. We can think about re-enabling this after full migration IF we want to. Restoring 10+ name editors was also a performance killer because it has to load the name editor AND expand the tree to the corresponding node."</p> <p>For restoring name editor: it is true that it might be performance problem. But only restoring the name editors without linking to the navigator is usually not a big issue. So we might want to switch of the linking for this somehow. Also we should have restoring as a preference same as restoring the navigator. With a second preference we could then let the user decide if linking should be switched of for restoring name editors.</p> <p>Idea:</p> <ul style="list-style-type: none"><li>• After CdmStore has connected invoke "open Part" command on saved editors.<ul style="list-style-type: none"><li>◦ Maybe in class LifeCycleManager or CdmStore.</li></ul></li><li>• EditorInput/UUID can be saved in the local preferences</li><li>• generic "open Part" command<ul style="list-style-type: none"><li>◦ ID: eu.etaxonomy.taxeditor.command.openPart</li><li>◦ command parameter: eu.etaxonomy.taxeditor.workbench.commandparameter.partName</li><li>◦ command value:</li></ul></li></ul> <p>For taxon name editors look at EditorUtil.openNameEditor_internal()</p>

As this is a master ticket only should we switch from Feedback to InProgress? Suits better IMO.

**#19 - 06/25/2018 07:14 PM - Andreas Müller**

Upps, sorry, I see that this is not a master ticket. However, InProgress or New might still be the better status.

Idea:

- After CdmStore has connected invoke "open Part" command on saved editors.
- EditorInput/UUID can be saved in the local preferences
- generic "open Part" command
  - ID: eu.etaxonomy.taxeditor.command.openPart
  - command parameter: eu.etaxonomy.taxeditor.workbench.commandparameter.partName
  - command value:

For taxon name editors look at EditorUtil.openNameEditor\_internal()
