Moving getUuidAndTitleCache (xxx) down to AnnotatableEntityService+Dao to me seems critical.

Annotatable entities do not have a titleCache so the default implementation in AnnotatableDaoImpl must fail.

For which non-identifiable classes do we really need such a method? Can't we use another label for this method to distinguish? In the other method we may write in the documentation that it may throw an exception in case it is not yet overridden in the according subclass.

I don't know how deeply this is related to this ticket, but we should discuss it somewhere.

The ticket itself seems to be fixed.

When choosing NO vocabulary in area search I get an exception:

Works correctly now. Can you still connect the revert of using `uuidAndTitleCache` search in `AnnotatableService/Dao` to this ticket? Or is this already done in one of the commits?

Can be closed.

#7 - 01/18/2021 10:45 AM - Andreas Müller

- % Done changed from 80 to 100

As this is too long ago we close the ticket without linking to the revert.
