

## EDIT - bug #7134

### Loading/rendering of name editor takes extremely long for taxa with a lot of synonyms

12/11/2017 10:30 AM - Patrick Plitzner

<b>Status:</b>	New	<b>Start date:</b>	
<b>Priority:</b>	New	<b>Due date:</b>	
<b>Assignee:</b>	Katja Luther	<b>% Done:</b>	0%
<b>Category:</b>	taxeditor	<b>Estimated time:</b>	0:00 hour
<b>Target version:</b>	Unassigned CDM tickets	<b>Found in Version:</b>	
<b>Severity:</b>	normal		
<b>Description</b>			
Example taxon in Campanula production: Campanula rotundifolia			
As we don't load a lot of data in terms of bytes then it is probably related to the number of service calls. Maybe a service method that fetches all information about taxon and its synonym at once on DB-level could help.			

#### History

##### #1 - 12/11/2017 11:42 AM - Andreas Müller

- Assignee changed from Andreas Müller to Katja Luther

As far as I know this is more related to the building of the GUIs due to the way how the name editor works and is build. But of course we could also check if we can still reduce the number of service calls and initialize more in advance.

We checked the network monitor and the connection was permanently active while the Taxeditor was rendered as "not responding" so it must also have to do with the service calls
