<b>Severity:</b>	normal		
<b>Description</b>			
<ul style="list-style-type: none"><li>• the controller method <code>exportGetExplanation()</code> which is mapped to <code>/dwca</code> returns an html page which will in future contain the documentation of the webservice. The documentation however is in general produced through swagger. Therefore this method seems to be a concurrent approach to produce webservice documentation. I advocate for removing this method and to add proper swagger annotations where needed.</li><li>• swagger annotations are at least need for all request parameters of the type <code>UuidList</code>. All these appear as <code>List&lt;String&gt;</code> in swagger, so the user does not know what to pass to the web service.</li><li>• Passing an invalid uuid as classification causes a <i>Error 400 Bad Request</i> with no further information on the cause, better error reporting is needed here</li></ul>
