The update site is now deleted by using the sshexec feature of the maven wagon plugin. The goal is part of the uploadRepo profile in the pom.xml of the eu.etaxonomy.taxeditor plugin and is executed in the *clean* phase before the update site is uploaded.

Added *clean* to the corresponding maven call in the jenkins job.

There are still editor jars with multiple versions accumulating in update site:
eg:

There are multiple files but this seems to be another issue. As they are all from the current build updates should work now.
