<b>Description</b>			
mail von Henning:  noch eine Folge davon, dass bibliografische Autoren nach einigen Positionen als et al. abgekürzt werden. Suche ich nach Autoren, die im bibliografischen Autorenstring vorkommen, bekomme ich die Autoren und die entsprechenden Teams.  Fiktive Suche nach „Richt.“ Richt. Richt. Richt. Soundso & Richt. Soundso & Richt. Soundso, Richt., Müller & al. (Annahme & al. = Meyer)  Aber : Suche nach „Meyer“ ergibt keinen Treffer des Teams, in dem es vorkommt, da der Name nicht im Cache vorkommt. Meyer Meyer Meyer  Das erschwert die Analyse und Suche nach Doppelten.

#### History

##### #1 - 03/13/2018 03:45 PM - Andreas Müller

Generally we need "advanced searches" for all types of searches like bulk editor, taxon search, etc.

However, the current search always works on titleCache or similar and this should stay as it is as simple search. There are other ways to do e.g. deduplication by e.g. using the referencing objects view together with bulk editor.

In the given case we probably will add more cache fields to Person/Team which includes 1 or 2 cache fields for citation while the titleCache in future will hold the most complete information full name(s). Search will then run on titleCache and all other caches.
