

Edit - bug #7313

eu.etaxonomy.cdm.dataInserter.RegistrationRequiredDataInserter add all terms to vocabulary

03/15/2018 04:05 PM - Andreas Kohlbecker

Status:	Closed	Start date:	03/15/2018
Priority:	Highest	Due date:	
Assignee:	Andreas Kohlbecker	% Done:	100%
Category:	cdm-vaadin	Estimated time:	0.00 hour
Target version:	Release 5.1	Found in Version:	
Severity:	normal		

Description

Im eu.etaxonomy.cdm.dataInserter.RegistrationRequiredDataInserter werden KindOfUnitTerms angelegt:

```
if (repo.getTermService().find(KindOfUnitTerms.SPECIMEN().getUuid()) == null) {
repo.getTermService().save(KindOfUnitTerms.SPECIMEN());
}
if (repo.getTermService().find(KindOfUnitTerms.PUBLISHED_IMAGE().getUuid()) == null) {
repo.getTermService().save(KindOfUnitTerms.PUBLISHED_IMAGE());
}
if (repo.getTermService().find(KindOfUnitTerms.UNPUBLISHED_IMAGE().getUuid()) == null) {
repo.getTermService().save(KindOfUnitTerms.UNPUBLISHED_IMAGE());
}
if (repo.getTermService().find(KindOfUnitTerms.CULTURE_METABOLIC_INACTIVE().getUuid()) == null) {
repo.getTermService().save(KindOfUnitTerms.CULTURE_METABOLIC_INACTIVE());
}
}
```

Die müssen in ein Vocab.

a.mueller:

Ja, das sollte man dann in den Inserter mit aufnehmen.

Möglichst die UUID von dem voc aus Phycobank nehmen, damit immer die selbe verwendet wird.

ref #7313 creating vocabulary before terms

History

#1 - 03/22/2018 05:42 PM - Andreas Kohlbecker

- Description updated

The original description was referring to terms which have been created during IAPT import, which has already be run and which will never be used again. So the only terms that still need to be associated with Vocabularies are are the KindOfUnitTerms (See new issue description)

#2 - 03/23/2018 11:19 AM - Andreas Kohlbecker

- Priority changed from New to Priority14

completed.

@a.mueller: please review my implementation

#6 - 06/27/2018 11:31 AM - Andreas Müller

- Status changed from Resolved to Feedback

- Assignee changed from Andreas Müller to Andreas Kohlbecker

This should work.

Personally I would first load/save the voc and then check the terms and add each term which is not yet attached to a vocabulary. This avoids saving a term without a voc at any time (maybe in future it will be forced). However, this is minor.

We could also remove "txStatus.flush();" before commit as it is redundant.

Final note: the static terms are often used only to retrieve the uuid. Why not making the static uuids public them self (while the static terms are probably not really needed). But this is also minor code styling.

Agreed and code modified.

We could also remove "txStatus.flush();" before commit as it is redundant.

Agreed and removed this line.

Final note: the static terms are often used only to retrieve the uuid. Why not making the static uuids public them self (while the static terms are probably not really needed). But this is also minor code styling.

The way terms are used is anyway a bit error prone and should be changed in the registration code. I will open another ticket for this.
