

EDIT - feature request #7509

Aggregate and persist specimen character data from character matrix

06/25/2018 10:18 AM - Patrick Plitzner

Status:	Closed	Start date:	
Priority:	New	Due date:	
Assignee:	Patrick Plitzner	% Done:	100%
Category:	taxeditor	Estimated time:	0:00 hour
Target version:	Release 5.3		
Severity:	normal		
Description Currently we only have a temporary aggregation row and the aggregated values are not persisted. For persisting the aggregated data a new taxon description should be created at a common parent taxon node i.e. a taxon node that is direct or indirect parent to all the taxon nodes belonging to the descriptive data set. When invoking the aggregation routine either the common parent node is chosen or a new taxon is created that is a direct child of the common parent node.

- *% Done changed from 0 to 100*

This has already been solved.

Aggregated descriptions are saved in the DescriptiveDataSet and shown in the character matrix.
