Description

Vaadin Registration Workingset Editor

Click on "new name" starts a new name popup editor. The blue progressbar on top is fine, but if ignored users just look for the name popup editor, if it is not opening immediately users might click a second time on "new". This loads a second name popup editor. The function is okay.

The feature request: allow only to open one name popup editor and ignore further clicking on "new" until the new registration is saved.

Add a new registration for a **new name** or an existing name.

For most names that already exist in the system it is only possible to create a registration covering type designations. Only in those rare cases where the citation of this workingset and the nomenclatural reference of a name are the same it is possible to create a registration covering the name also. In all other cases please choose "New" from the main menu and start a registration for the nomenclatural reference of the name to be registered.

can you please elaborate your request a bit more?

I don't quite understand which button you are referring to. The RegistrationWorkingsetEditor has no "New" button, there is only the "new name" which opens a modal dialog for a new name. While this dialog is open the "new name" button can not be clicked.

"new name" is meant.

After clicking on "new name" the system needs some time to open the next form/dialog. If the blue line is ignored (arrows in the screen shot), a user might click a second time on "new name" before the form/dialog is open (because he/she thinks that nothing happens). This opens two identical forms.

Issue not resolved. May be a problem of the slow test server.
