Description

Media types should be rendered in the following form depending on their type:

- **unpublished** (has collection information): "[icon] {collection} {accession_number}" in case the media url is set the accession number can be rendered as link in webapplications
- **published** (no collection information): "[icon] {ref_detail} in {reference}" in case the media url is set the ref_detail can be rendered as link in webapplications

It would be much easier to implement if the "[icon]" text would be clickable instead.

What do you think about this idea?

Good idea, than the "[icon]" string makes really sense.

Implemented, but I needed to display the link to the image as icon, which now directly follows the "[icon]". This was need for consistency with other pages in the dataportal.

Please review.
