Altitude

200,5 is given as 200

2.5 or 2,5 is given as 2

Because altitudes can not be that exact this is okay with me.

Error radius (same as Altitude, okay with me)

Distance to water surface AND Distance to substrate:
accepts Komma and Dot=Komma

Data input: many digits right to the Komma possible.

In Vaadin: 3 digits right to the Komma are displayed = 1/10 cm, that is precise enough.

Users should be fully satisfied with this implementation.

Ticket can be closed.
