Search implemented and functioning. Search result need some time. No user feedback, if a string is not in the system. For the moment the implementation works for me. Final adjustments can be done later.

Search for included genera/species by stings (Naviculaceae, Naviculales), not included in Phycobank as registered names is functioning.

Search for strings, not included in taxonGraph gives no results (= bug fixed, because in this case all records had been displayed)

Warn: Some higher taxa give no results, this might be due to the truncated import (e.g. "Euglenales")
