Test 1 (test system): Book entered as admin into Vaadin, Book section as submitter in vaadin, new name and type for existing name without problems.

Test 2 (test system): Book entered as admin into TaxEditor, Book section as submitter in vaadin, new name and type for existing name without problems.

Result: the initial problem was not the book section, but "double click" onto a selected name, or check for an existing name, than click on new name.
