<b>Severity:</b>	normal		
<b>Description</b>			
<p>creating a new node creates always an alternative linked to the next node and the second alternative is placed behind. Alternatives linking to a taxon are always behind this initial alternative but usually the alternative linked to a taxon is on first place.</p> <p>To provide this functionality we need a move up/down method for alternatives or when creating a new alternative it should be possible to choose between insert before or behind the actual alternative.</p>
