@Andreas: Should it be allowed at all to add a new term to the Country vocabulary?

The problem is in the TermType class which does not have a specific value for Country, thus a new NamedArea is added to the list of Countries which causes the exception.

Can we handle this special case hardcoded until the terms modul is more elaborated?

E.g. by testing if the vocabulary is explicitly the countries vocabulary and then disallow to add a term at all (adding countries should not be allowed as the vocabulary is managed).
