State of the art (29.01.2019):

Main issue resolved (see 1 on the screenshot): No jumping of the shown screen = bug fixed

Minor issue (see 2 on the screenshot): Scrolling down the breadth of the combobox is changing in the range marked on the screenshot.

Comment: This might be neglected. This ticket might be closed.

Please review this and decide.

This behavior is built into the combobox widget. Giving it a fixed width is causing other problems, so I suggest to ignore this or to accept it as feature.

I will close the ticket.
