**Description**

Using LocalSelectionTransfer is in most cases too generic. It is better to define an own TransferData and assign the dragged data to the event in DragSourceAdapter.dragSetData()

```
    @Override
    public void dragSetData(DragSourceEvent event) {
        event.data = dragData;
    }
```

**If** LocalSelectionTransfer is used make sure to set the selection to **null** when the operation is done in DragSourceAdapter.dragFinished()

```
    @Override
    public void dragFinished(DragSourceEvent event) {
        super.dragFinished(event);
        LocalSelectionTransfer.getTransfer().setSelection(null);
    }
```

**History**
